

Deburring Two Sides In One Pass

Haeger SBM – S for Deburr and Edge Rounding

With this new machine you will deburr both sides of the sheet at one time Creating no sharp edges that may need to be hammered.

Completely deburr and round the edges on internal and external edges.

The unique system used will offer long and even wear of consumables. Creating a very cost and time effective process.

Since only the edges are deburred the surface is not damaged, this means there is very little environmental waste.

Two sides in one pass, low environmental impact, much quieter than traditional methods means a much safer work place for your employees.

Features:

- Deburr and edge rounding two sides in one pass
- No need to turn sheet over.
- Deburr all internal and external edges.
- Dry operation - no removal of water or rust required.
- Deburr sheets protected with film without damage of film
- No damage to material surfaces
- 60% faster than traditional methods
- Consistent high quality edges
