Creating Hardware Insertion Profit Centers

*A comprehensive guide
to ordering Haeger tooling
for the manual installation
of self-clinching fasteners.*

Manual Tooling Catalog

Manual Tooling Catalog

SECTION 1 INTRODUCTION

Preface 1.1
Using the Tooling Catalog 1.2

SECTION 2 BASIC TOOLING

Standoff Tooling 2.1
Nut Tooling, Pin Style 2.2
Stud Tooling, Inch 2.3
Stud Tooling, Metric 2.4
Nut Tooling, Pocket Style, Inch 2.5
Nut Tooling, Pocket Style, Metric 2.6
Anvils 2.7
Soft Face Tooling 2.7
Adapters & Extenders 2.8
Stud Depressor Tooling, Inch 2.9
Stud Depressor Tooling, Metric 2.10

SECTION 3 ROTARY TOOLING

Rotary Nut Tooling 3.1
Rotary Stud Tooling 3.2

SECTION 4 J-FRAME NUT TOOLING

J-Frame Tool Holder 4.1
J-Frame Nut Tooling, Pocket Style 4.2
J-Frame Nut Tooling, Pin Style 4.2
J-Frame Tool Holder 4.3
J-Frame Stud Tooling 4.4

SECTION 5 MISCELLANEOUS

SP Nut Lower Tool 5.1
TD Lower Tool 5.2
Right Angle Fastener Tool 5.3
FH4 Stud Coining Ring Tool 5.4
Panel Fastener Tooling, Anvil, Inch 5.5
Panel Fastener Tooling, Anvil, Metric 5.6

SECTION 5 MISCELLANEOUS CONT

Panel Fastener Tooling, Punch, Inch 5.7
Panel Fastener Tooling, Punch, Metric 5.8
Miniature Nut Tooling, Inch 5.9
Miniature Nut Tooling, Metric 5.10
Floating Nut Tooling, Inch 5.11
Floating Nut Tooling, Metric 5.12
Self Locking Nut Tooling 5.13
Hex Self Locking Nut Tooling 5.14

SECTION 6 SOUTHCO

Retractable Screw Assembly No. 47, Press In Type 6.1
Retractable Screw Assembly No. 47, Flare Type 6.1
Retractable Screw Assembly No. 47, Back-Up Tooling 6.2

SECTION 7 RIVETS

Universal Head Solid Rivet Tooling 7.1
Round Head Solid Rivet Tooling 7.2
Tubular Roll Rivet Tooling 7.3
Tubular Flare Rivet Tooling 7.4
Tubular Rivet Dolly Tooling 7.5
Buck Tooling 7.6

SECTION 8 HANK RIVET BUSH

Hexagonal Hank Bush Tooling 8.1
Round & Tank Hank Bush Tooling 8.1
Hank Mini-Sert Tooling 8.2

SECTION 9 KERB KONUS

Punch, MINI ANCHOR Tooling 9.1
Punch ANCHOR Tooling 9.2

SECTION 10 STANDARD MANUAL TOOLING PACKAGES

Standard Tooling Package 10.1
Metric Tooling Package 10.2
412 & J Frame Standard Tooling Package 10.3
412 & J Frame Metric Tooling Package 10.4

SECTION 11 BTM JOINING TOOLING

General Description 11.1
Set Up 11.2
Process 11.3
Technical Description 11.4
Joint Sizes 11.5
Punch & Die Assemblies 11.6
Joint Data Table .12 Punch 11.7
Joint Data Table 3mm Punch 11.8
Joint Data Table .18 Punch 11.9
Joint Data Table 4.6mm Punch 11.10
.12 Joint BTM Drawing 11.11
.12 Joint BTM Tooling 11.12
.18 Joint BTM Drawing 11.13

SECTION 12 TOOL HOLDERS

BTM Upper Tool Holder 12.1
Quick Change Lower Tool Holder 12.2
BTM Lower Tool Holder 12.3
Square Tip Lower Tool Holder 12.4

Haeger, Inc. is widely recognized as the industry leader in the development and implementation of innovative self-clinching fastener installation technologies. For over twenty years, Haeger engineers have been designing and building flexible systems for installing practically every kind of self-clinching fastener into practically every kind of work piece - creating new technologies to help Haeger owners get just about any job done productively and profitably.

Over the years, Haeger's innovative tooling and patented quick-change automatic fastener feeding systems have revolutionized the way the world's fabricators and manufacturers install hardware.

So whenever your operation faces an insertion challenge, turn to the manufacturer with the most experience in developing self-clinching fastener insertion solutions. Turn to Haeger.

Fasteners

The Standoff, Stud and Nut Tools listed in this catalog are designed to be used with standard fasteners, such as those manufactured by Captive Fastener Corporation and PEM (Penn Engineering & Manufacturing Corporation).

Fasteners, such as Camcar's Strux line are slightly larger and require different tooling which can be supplied by Haeger's Specials Group. Please consult your local Haeger Distributor for further information.

Unless otherwise noted, the maximum length stud these tools will accommodate is 1.25 in./31.7 mm.

Delivery

The tools and tool holders in Sections 2, 3, 4, 9, 10, 11 and 12 are stocked and are available for immediate shipment. The tools in Sections 5, 6, 7 and 8 may be subject to a two week lead time.

Drawing Dimensions

In all drawings found in this catalog, the dimensions A, B and C are defined as follows:

- A. Overall length of the tool
- B. Height the tool extends above the Lower Tool Holder
- C. Largest diameter of the tool

Other tool dimensions found in the catalog will always be labeled D or higher in the alphabet.

Inch/Metric Dimensions

Some of the tools in this catalog may be used for both inch and metric fasteners. In these cases, the inch and metric part numbers are identical. They are listed separately for the convenience of the user.

If only inch or only metric tools are available, the tools are dual dimensioned.

Flush Nut Installation

Flush nuts can be installed using two flat anvils with diameters larger than the nut.

J-Frame Tooling

In addition to being used in the J-Frame, this tooling may also be used in the Square Tip Lower Tool Holder.

Standoff Tooling

INCH

Part #	Fastener Size	Dim. A in	Dim. B in	Dia. C in	Dia. D in

J-Frame Tool Holder

Part #	Description
H-167-1	J-Frame Tool Holder

Note:

1. The **Maximum Load** on the J-Frame Tool Holder is **9,000 lbs/40 kN**. This Tool Holder may be used with both inch and metric tooling.

Note: These dimensions apply only to Haeger's current 618 and 824 models. For all other models, some of the dimensions may vary slightly.

BTM Tog-L-Loc Joining Tooling

For use on Haeger Press

The joining process involves clinching ductile metals with a single ram stroke. Joining produces an instant button headed joint in most ductile metals without using fasteners of any kind.

The two metals to be joined are held between a special punch and die. The non-piercing punch draws the metals into the die. As the punch continues its travel, it squeezes the metals. The lateral flow of metal is accommodated by moving die blades, forming a lock of greater diameter than the drawn section. The result is an instant, high strength, vibration resistant "button" head. This takes place in a single ram stroke.

Joining has numerous advantages over both spot welding and riveting. It's environmentally clean, producing no sparks or noxious fumes. Additionally, pre-coated surfaces are not burned and no heat build-up or warping occurs. Joining does not require any preliminary operations and eliminates the need for a rivet inventory.

Brass, aluminum, galvanized, pre-painted, mild steel and stainless (with different type of tooling) are all capable of being joined together. Both similar and dissimilar material can be joined.

In addition to installing hardware, the Haeger press can be used for these joining applications. The Haeger press has a much greater throat depth than presses built by joining machine manufacturers, allowing for much greater versatility. Plus if you already own a Haeger, you only need to buy a tooling set to be able to perform joining applications.

There are five tooling components required to perform joining operations on a Haeger Press: a special upper tool holder, a special lower tool holder, a punch assembly, a die assembly and a die holder. The upper tool holder and the lower tool holder are both one-time purchases.

Set-up and Operating Instructions For using BTM Joining Tooling on Haeger Press

1. Install the special lower tool holder onto the lower part of the C-Frame. The adjustable guide inside the lower tool holder must be firmly pressing against the mounting screw.
2. Install the die holder into the lower tool holder and then mount the die assembly into the die holder. These items will likely be assembled when shipped.
3. Mount the special tool holder onto the ram and then mount the punch assembly into the upper tool holder.
4. Remove the spring cover and spring around the outside of the punch assembly so the punch is exposed.
5. Put the Haeger press in set-up mode and non-conductive mode. Set the pressure to it's lowest setting.
6. Bring the ram down until the punch is just above the die assembly. Adjust the lower tool holder until the punch is precisely centered on the lower tool anvil.
7. Move the ram up and replace the stripper and spring.
8. Return the press to run mode and conductive mode.
9. Place the material between the upper and lower tools and bring the ram down and apply pressure.
10. Check the diameter of the button on the bottom of the joined material. Increase pressure until the desired button diameter is reached.

Should you require any assistance, please contact your distributor or Haeger's service department.

Tog-L-Loc is a circular, leakproof joint formed by drawing the metals into a circular “cup” and then expanding the diameter to form a 360° radial lock below the bottom sheet.

How the Joining Process Works

1. CLAMPS

The metals are clamped between the stripper and the die guard.

2. DRAWS

The non-piercing punch draws the metal into the die.

3. LOCKS

The punch continues to travel, squeezing the metals.

4. STRIPS

As the punch retracts, the stripper allows the punch to be removed.

The lateral flow of metal is accommodated by the patented moving (self-cleaning) die blades, forming a lock of greater diameter than the drawn section which accounts for high strength and vibration resistance of Tog-L-Loc. This entire sequence takes place in a single motion or press stroke.

TECHNICAL DESCRIPTION BTM JOINT
--

- A = PUNCH SIDE MATERIAL
 B = DIE SIDE MATERIAL
 C = JOINT SIZE (PUNCH TIP DIAMETER)
 D = BUTTON DIMENSION OR DIAMETER
 E = CAP HEIGHT
 F = PUNCH ENTRY INTO DIE (ESTIMATED 2/3 OF ANVIL DEPTH)
 G = CAP THICKNESS

TOG-L-LOC JOINTS CAN BE CHECKED NON-DESTRUCTIVELY USING THIS SIMPLE GAGE. THE "BUTTON" MUST MEASURE WITHIN THE TOLERANCE OF THE GAGE.

MEASURING JOINT BUTTON DIAMETER (BD).

MAX.

BTM "GO-NO GO" GAGES ARE A SIMPLE OPTION FOR MEASURING THE BUTTON DIAMETER.

MIN.

Three joint sizes are available as shown below:

<u>Joint required</u>	<u>Punch Diameter</u>	<u>Approximant Tonnage</u>
12	3mm (.12")	.12—2.5 Tons
18	4.6mm (.18")	.18—3.5 Tons

1. Select joint size.
2. Determine both punch side and die side material type and thickness.
3. Look up application on joint data table. Verify shear and peel strength are acceptable.
4. Determine punch tip radius and anvil depth.
5. Select appropriate tooling from the chart on next page.
6. Not recommended for use with Stainless Steel.

Complete Assembly Part No. H-3501-5

Item	Part No.	Description	Qty.
1	H-149-1	Upper Tool Holder Body	1
2	H-215-125	Continuity Spring	1
3	H-195-1	Continuity Spring Guide Pin	1
4	H-3700	10-32 X 7/16 Thumb Screw	1
5	H-3548	10-32 X 1/4 SHSS	1
6	H-3549	10-32 X 3/8 SHCS	1
7	H-3773	1/4-28 X 1/4 SHSS	1

Note: This tool holder may be used on the HP2.5, HP6, 618 and 824 machines.

Complete Assembly Part No. H-166-8

Item	Part No.	Description	Qty.
1	H-166-8	Lower Tool Holder Assy	1
2	11-00042	Locking Lever	1
3	11-00041	Lock Cylinder	1
4	11-00212	Lock Cylinder Spring	1
5	11-00199	Spring Roll Pin, 1/8 X 1/4	1
6	H-3568	#10-32 X 1" BHCS	1
7	H-169-6	Lower Tool Washer	1
8	11-00191	M16X2 SHCS Modified	1
9	H-169-4	Shoe	1
10	H-169-5	Pin	1

Note: This tool holder may be used on all HP2.5, HP6, 618, 824, 618 Plus, and 824 Plus machines.

Complete Assembly Part No. H-147-2

Item	Part No.	Description	Qty.
1	H-147-1	Lower Tool Holder Body	1
2	H-169-4	Shoe	1
3	H-169-5	Pin	1
4	11-00191	M16 SHCS Modified	1
5	H-169-6	Lower Tool Washer	1
6	H-3859	3/8-24 X 2 SHCS	1
7	H-3773	1/4-28 X 1/4 SHSS	1
8	H-3890	5/8-18 X 2-3/4 SHCS	1
9	11-00190	M16 X 2.0 X 65 SHCS	1

Note: This tool holder may be used on the HP2.5, HP6, 618 and 824 machines.

Complete Assembly Part No. H-170-1

Item	Part No.	Description	Qty.
1	H-170-1	Sq. Nose Lwr Tool Holder Assy	1
2	11-00191	M16 SHCS Modified	1
3	H-169-4	Shoe	1
4	H-169-5	Pin	1
5	H-3625	8-32 X 1/8 SHSS	1
6	H-3761	10-32 5/8 BHCS	1
7	H-169-6	Lower Tool Washer	1

Notes:

1. This tool holder may be used on all HP2.5, HP6, 618 and 824 machines.
2. The J-Frame Stud Tooling (H-102), Pocket Style Nut Tooling (H-100) and the Pin Style Nut Tooling (10-006xxx) may be used in this tool holder.
