

Brush Support for Large Part

Special Applications & Solutions for Insertion Machines

Description of Application:

Customer installing fasteners in large cabinet (26 inch X 26 inch) with J-Frame tooling on Haeger 736 WindowTouch.

Customer Requirement:

Part is large and heavy and very awkward for the operator to move while inserting hardware.

Haeger Solution:

Haeger proposed and then supplied a brush support at the rear of the frame opening. The operator only needs to lift the part in place on the brush but does not have to support the part once in place.

Customer Benefit:

Operator fatigue is dramatically reduced enabling faster and more consistent production rates.
